

Juliette Armand

AMESON

A Skin Medical Series

ameson

[á-me-sos] *adjective* • **Greek**

The one that takes place without interval of time,
without any delay: ~ *result / intervention*

The reason I sign on these cosmetics is not a desire for fame. Behind this signature there is a message. A personal dialogue. When I am at the lab researching and developing a new formulation, I see before me the needs of each person individually, as if I am about to create a personal line of skincare.

Ioulia Armagou
Chemist
President of Juliette Armand

Our path in time

Our Personal Start

Juliette Armand was established in 1992, when chemists Ioulia Armagou and Michalis Papaefstratiou decided to become involved in the beauty industry, to explore new formulas and to present their personal values to laboratories. That is how Juliette Armand, The Personal Professional Skincare came into being, to create innovative cosmetics, based on scientific research.

Our Professional Way

Our activity focused on trying to obtain maximum efficiency formulations, to meet the high standards of professional skincare.

Our Professional Reputation Internationally

The Juliette Armand brand name and the Elements, Skin Boosters, Sunfilm and Ameson series have gained a strong position at beauty centres and are already present in more than 40 countries around the world.

Our Professional Investment

Thanks to our success, our company now owns a vertical production unit in Athens, located at a state-of-the-art facility. We have invested in advanced technological equipment and highly trained personnel, and have obtained international certifications based on stringent standards.

Our Personal Determination

Since 1992, science has changed dramatically and the beauty industry today has to meet particularly demanding requirements. We continue and persevere as passionately as before in trying to find the next formula, the next formulation, the next innovation.

Our values

1. Formulas

Continuous search for innovation.

2. Scientific conscience in the selection of ingredients

- Nature alone is not enough and is not always safe.
- Which natural ingredients, of what origin and in what synergies?
- How much nature and what technology?
- When should technology prevail and when should nature remain the exclusive factor?

These scientific questions require safe and effective solutions. We provide answers that constitute the secrets of our formulas. We do not serve "ecological" needs or "fake" dilemmas. What is natural is not necessarily safe. For us, the safety, quality and effectiveness of the products are determined by quality control.

3. Production

All Juliette Armand products are manufactured in our laboratories in accordance to the European Union's Good Manufacturing Practices (GMP) for cosmetics.

4. Packaging

Juliette Armand packages are designed to provide:

- Water-tightness

- Safety, with security seals
- Environmentally friendly inert materials
- Materials without extra volume and weight (excessive paper) that do not have increased disposal requirements and do not increase the product cost
- Materials of high aesthetic standards, functional, practical, reliable and durable

5. Effectiveness

Product effectiveness is documented without exaggerations. It is based on laboratory, clinical and dermatological tests of raw materials and end products.

6. Quality Control

We implement a strict quality control process in accordance with European Union regulations (Physicochemical and microbiological control of raw materials and end products, preservatives control, SPF certification, Challenge test, etc.).

7. Application competence

Experienced and well-trained scientific personnel (chemists, biologists, doctors and cosmeticians) are always available to provide all required information.

8. Environmental responsibility

Juliette Armand is committed to operating its business with awareness and respect to nature, people and the future. Raw

materials, methods and all stages of production reflect this commitment towards the environment, at all times and in all procedures. Unconditionally.

9. Respect to customers

Our customer relationships conform to ethical rules and are governed by honest promises, reliability, clear results and consistency.

10. Social Responsibility

Beauty is not vanity. Cosmetics are not a luxury. They are products that satisfy the need for care and self-respect. Our advanced formulas are personally addressed to all people and are intended to make them feel well and comfortable in their skin. This is signified by our affordable prices.

Milestones

1992

Chemists Ioulia Armagou and Michalis Papaefstratiou establish Juliette Armand and focus their work on the research of highly effective formulas.

1993

The Notabilia cream is created and runs a very successful course. Its advanced formula (Extra Moisturizing Cream) can effectively compete with later-developed creams.

1996

A pioneer in the use of hyaluronic acid, Juliette Armand creates a wide range of serums in defense of their high effectiveness. In serum form, active ingredients are present in maximum content; 21st century cosmetology has just begun.

2001

The company is established in Athens, at state-of-the-art, privately-owned, integrated premises, constantly investing in sophisticated equipment, new procedures, research, new products and well-trained scientific personnel. Production process complies with the European Union's Good Manufacturing Practices (GMP) for cosmetics.

2003

In a period when everything is impersonal and industrialized, the founders of Juliette Armand decided to establish a personalized company. Based on their personal and professional values, they have created their own concept – The personal professional concept. And it guides every step of their course.

2004

The innovative EFFECTOX™ technology by Juliette Armand stops cellular contraction, by minimizing expression lines (muscle ageing). This discovery by Juliette Armand laboratories marked the success of the SKIN BOOSTERS anti-surgery system, cosmetology's alternative to botox, eyelid surgery, chemical peeling, mesotherapy and liposuction. With Skin Boosters, your appointment with plastic surgery is postponed!

2005

Elements: a complete professional line of high-end products, the elements of evolution for face and body beauty and health, a new, complete method of combined action and total treatment of all skin conditions. A big range of products available to cover the needs of the most demanding skin types.

2006

A-2 BLOCKERS is a chrysanthemum herbal extract that has brought about a revolution to body care products. It specifically blocks $\alpha 2$ receptors, ensuring a non-stop lipolysis process.

2010

The company implements the ISO 9001 quality control system for research and development, manufacturing, packaging and marketing of cosmetics, as certified by TÜV Austria certificate.

2015

After 23 years of research, development and production of professional-quality cosmetics, Juliette Armand announces the AMESON Skin Medical Series, bringing all the benefits of science to medical aesthetic products. The name of the AMESON range, inspired by the Greek word AMESOS ('immediately'), underlines the commitment to medical aesthetic skin care with IMMEDIATE results.

2008

The new Sunfilm sunscreen line by Juliette Armand meets the very real needs for increased sun protection, in accordance to the 2006/647/EC decision by the European Union. The line contains ANTITOX™, a powerful cocktail of new-generation antioxidants which prevents DNA damage from sun rays, repairs DNA, prevents irritations and erythema, protects from pollution and prevents ageing.

2011

The two founders remain shareholders and the company is 100% Greek. Since 2011 Stratis Papaefstratiou-Armagos (B.Sc. Chemical Engineer) and Bill Papaefstratiou-Armagos (B.Sc. Finance & Mathematics, M.Sc. Computing Science) have also joined Juliette Armand shareholder group, signifying the contribution of the second generation to the company.

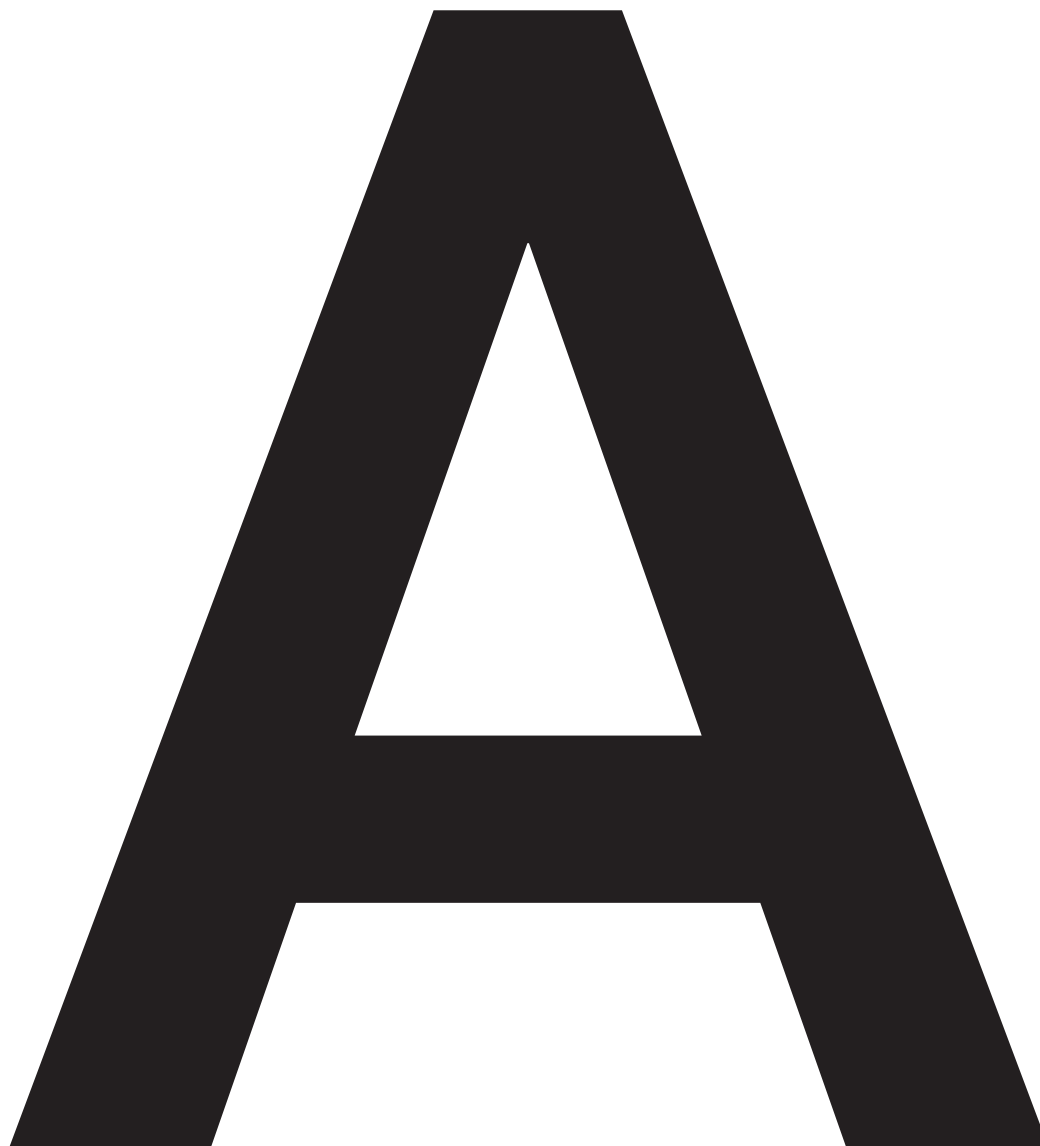

2017

Juliette Armand celebrates 25 years of success. A special moment in the brand's history and at the same time a new beginning. A moment to let go of things in the past and embrace new ones for the future.

Mesotherapy after

Science is taking us forward

Through our many years of presence and development in the field of medical aesthetic skin care, we present you the renewed Ameson Skin Medical line, with high-end products and treatments based on scientific expertise and proven effectiveness with lasting effect. Regarding the name of the Ameson series, inspired by the Greek word "Amesos" (immediately), we signify our commitment to an immediate result by improving the appearance and well-being of the skin with advanced, non-invasive and safe methods. Hyaluronic acid is still the inspiration and cornerstone of the entire Ameson line, and is surrounded by powerful and specialized ingredients with synergistic action.

The Ameson series is a modern and complete proposal for medical aesthetics. It includes three different product categories

which have a common denominator of safety, ease of use, immediate action, efficiency, specialization and high technology.

Ameson Mesopeel

Complete series of chemical peeling products that fulfill the individual needs of every human skin.

Ameson Mesotech

Mesotherapy products that fulfill a wide range of needs for the face and body.

Mesotherapy after

A strong combination of actions that help in the prompt recuperation after the application of mesotherapy and chemical peeling protocols, with the products Bio-Cellulose Mask, Calming Bliss and Repair Gel.

Mesopeel

Mp

Ameson Mesopeel is a professional chemical peeling system based on organic acids, aimed at rejuvenating the skin and making it glowing, bright and soft.

Organic Acids

Alpha hydroxy acids (AHAs) are organic molecules, whose action depends on their chemical structure, concentration and pH. The AHAs used in the Ameson Mesopeel series include mandelic acid, lactic acid and glycolic acid.

Laboratory and clinical studies have identified and proven the results of their action on the horny layer and dermis.

In particular, AHAs:

- Normalise the keratinisation process, thus restoring the epidermis normal rhythms.
- Activate the skin's rejuvenation process, increasing collagen and elastin production.
- Hydrate the skin.
- In synergy, enhance the action of other active components.

BHA & AZA:

The action of beta hydroxy acid (BHA), salicylic acid – which, as a keratolytic agent, has a potent exfoliating, anti-inflammatory and antimicrobial action – and azelaic acid's action (AZA) is similar.

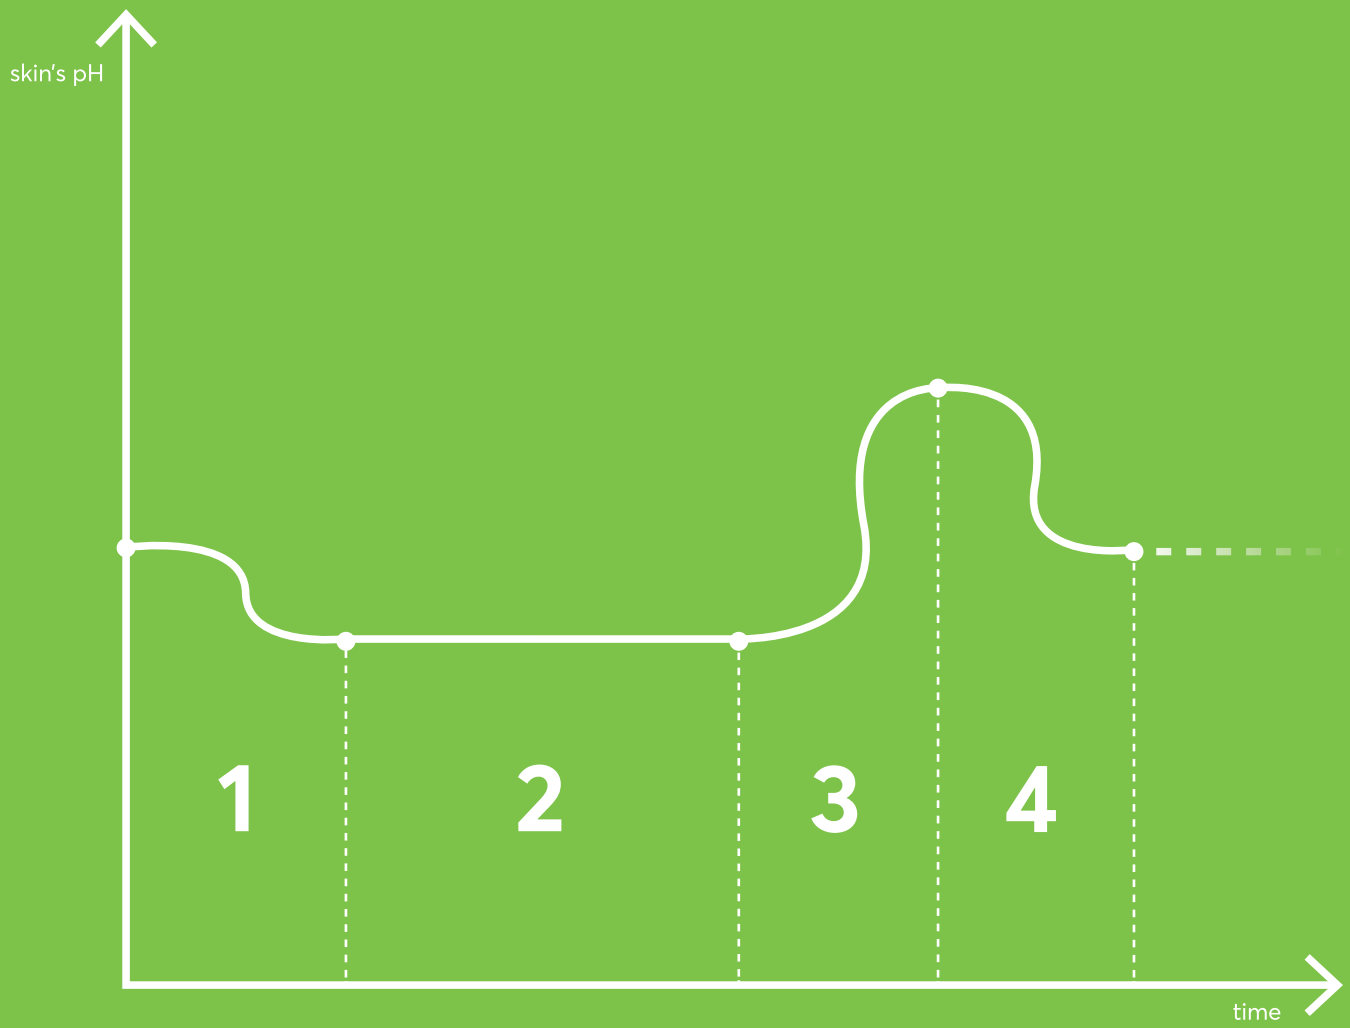

Thanks to the specific organic acids used, their concentration in combination with the pH of the peeling products, as well as the targeted application protocols, the Ameson Mesopeel series is superior when it comes to meeting the needs and addressing the problems of different skin types, under different climatic conditions.

The series includes:

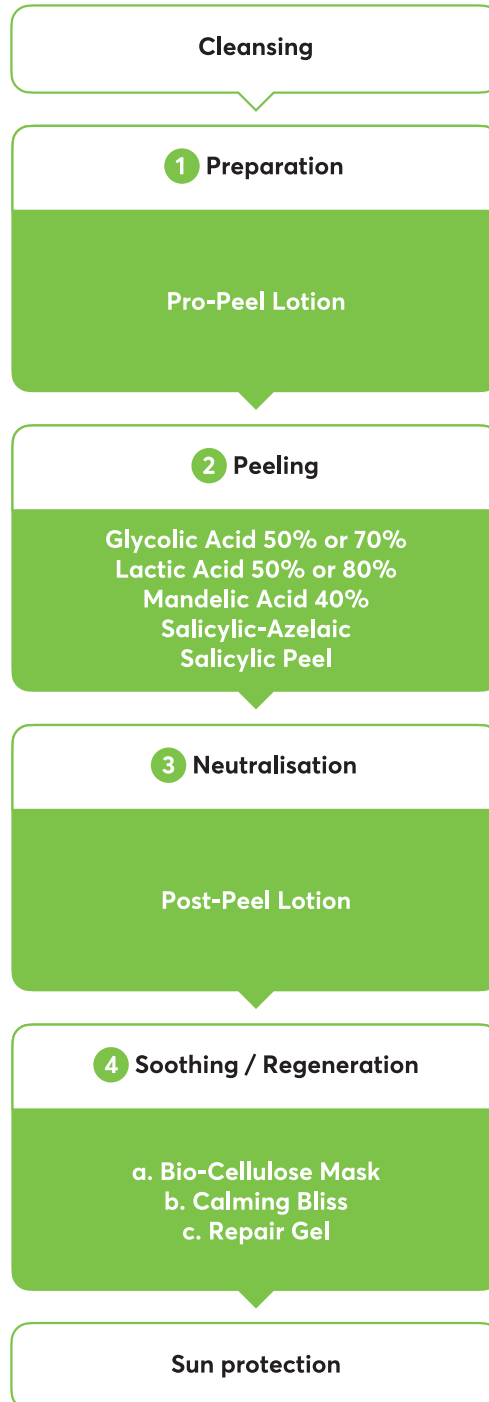

- 7 products containing AHA & BHA (alpha and beta hydroxy acids) and AZA (dicarboxylic acid)
- 2 Pro-Peel & Post-Peel products to adjust the skin's pH

Stages of a chemical peel

Preparation & Neutralisation

200ml

200ml

Pro-Peel Lotion

Acidic, buffering lotion with a pH~3.5 that reduces skin's pH. It contains lactic acid, glycolic acid, allantoin and panthenol that combine buffering, keratolytic, hydrating and soothing action, for a better and safer preparation of the skin prior to the chemical exfoliation.

Action: Reduces skin pH.

Skin need: Prepares the skin for a chemical peel.

Post-Peel Lotion

Alkaline, buffering lotion with pH ~ 8.5 that restores the pH of the skin to normal levels after chemical exfoliation. It offers soothing action and helps the skin recovery without irritations.

It contains the active ingredients allantoin, bisabolol and panthenol, which have a soothing action and help maintain skin tissue moisture for better recuperation without irritations.

Action: Neutralises the effects of the chemical peel product.

Skin need: Restores the skin's pH to normal.

Chemical Peeling

50ml

50ml

Glycolic Acid 50%

Glycolic acid in 50% concentration for immediate and powerful chemical exfoliation, suitable for all skin types. It offers skin renewal and regeneration while reducing the appearance of fine lines and discolorations.

Glycolic acid is an alpha hydroxy acid that is derived from sugar cane. It is one of the most popular anti-ageing active ingredients. Its small molecular structure – it has the smallest molecule of all alpha hydroxy acids – allows penetration into skin cells. Glycolic acid cleaves the bonds between keratinocytes on the horny layer and weakens the bonding properties of the lipids that retain the skin's dead cells, thus removing them. This results in the immediate and intense exfoliation of the horny layer, and simultaneous regeneration of cells. The systematic use of high concentrations of glycolic acid interacts with the fibroblast receptors, thus significantly stimulating the production of intercellular material (collagen, elastin, fibronectin, hyaluronic acid). The skin is therefore rejuvenated and regenerated. The 50% concentration in glycolic acid, in combination with the pH, result in targeted actions and indications.

Action: Keratolytic effect, skin cell regeneration, reduction of fine lines and discolouration, tightening, glow enhancement.

Indications: Keratosis, wrinkles, loss of firmness, dull skin, discolouration, photoaged skin.

Glycolic Acid 70%

Glycolic acid in 70% concentration for immediate and powerful chemical exfoliation, suitable for all skin types. It offers skin renewal and regeneration while reducing the appearance of wrinkles, superficial acne scars and discolorations.

Glycolic acid is an alpha hydroxy acid that is derived from sugar cane. It is one of the most popular anti-ageing active ingredients. Its small molecular structure – it has the smallest molecule of all alpha hydroxy acids – allows penetration into skin cells. Glycolic acid cleaves the bonds between keratinocytes on the horny layer and weakens the bonding properties of the lipids that retain the skin's dead cells, thus removing them. This results in the immediate and intense exfoliation of the horny layer, and simultaneous regeneration of cells. The systematic use of high concentrations of glycolic acid interacts with the fibroblast receptors, thus significantly stimulating the production of intercellular material (collagen, elastin, fibronectin, hyaluronic acid). The skin is therefore rejuvenated and regenerated. The 70% concentration in glycolic acid, in combination with the pH, result in intargeted actions and indications.

Action: Keratolytic effect, skin cell regeneration, reduction of wrinkles, reduction of superficial acne scars and discolouration, tightening, glow enhancement.

Indications: Keratosis, wrinkles, melasma, acne marks, discolouration, seborrheic keratosis, photoaged skin.

Chemical Peeling

50ml

50ml

Lactic Acid 50%

Lactic acid in 50% concentration for chemical exfoliation, suitable for all skin types.

It offers cellular regeneration, hydration and reduction of the appearance of fine lines on the skin.

Lactic acid is an alpha hydroxy acid that is derived from milk. As a result of its relatively greater molecular weight, its keratolytic action is milder than that of glycolic acid, thus preventing skin irritations. When applied, lactic acid cleaves the bonds between keratinocytes on the external layer, thus reducing them and leading to gradual regeneration. This results in a mild but effective exfoliation of the horny layer and in the simultaneous regeneration of cells. It stimulates the production of collagen and glycosaminoglycans that make up the intercellular material. Another advantage provided by lactic acid is that it naturally hydrates the skin; this action results in increased formation of ceramides, thus enhancing the function of the keratin barrier. The combination of mild exfoliation, regeneration and hydration that it offers makes it an ideal peeling treatment for sensitive and dehydrated skins and a good choice for skins that undergo chemical peeling for the first time. The 50% concentration of lactic acid in combination with the pH result in targeted actions and indications.

Action: Mild keratolytic effect, hydration, skin cell regeneration, reduction of fine lines.

Indications: Dry skins, fine lines, dark phototypes, acne rosacea.

Lactic Acid 80%

Lactic acid in 80% concentration for chemical exfoliation, suitable for all skin types.

It offers cellular regeneration, hydration and reduction of the appearance of wrinkles on the skin.

Lactic acid is an alpha hydroxy acid that comes from milk. As a result of its relatively greater molecular weight, its keratolytic action is milder than that of glycolic acid, thus preventing skin irritations. When applied, lactic acid cleaves the bonds between keratinocytes on the external layer, thus reducing them and leading to gradual regeneration. This results in a mild but effective exfoliation of the horny layer and in the simultaneous regeneration of cells. It stimulates the production of collagen and glycosaminoglycans that make up the intercellular material. Another advantage provided by lactic acid is that it naturally hydrates the skin; this action results in increased formation of ceramides, thus enhancing the function of the keratin barrier. The combination of mild peeling, regeneration and hydration that it offers, makes it an ideal peeling treatment for sensitive and dehydrated skin and a good choice for skin that will undergo chemical peeling for the first time. The 80% concentration of lactic acid in combination with the pH result in targeted actions and indications.

Action: Mild keratolytic effect, hydration, skin cell regeneration, reduction of wrinkles.

Indications: Dry skins, melasma, keratosis, wrinkles, acne rosacea, photoageing.

Chemical Peeling

50ml

50ml

Salicylic-Azelaic

Mixture of salicylic and azelaic acid for chemical exfoliation, suitable for acne-oily skin.

It offers antimicrobial and anti-inflammatory action while regulating sebum secretion and reducing oiliness.

Salicylic acid is a beta hydroxy acid with astringent and keratolytic properties. Moreover, it has antibacterial and anti-inflammatory properties that regulate sebum secretion and reduce the oiliness of oily-acneic skin. Azelaic acid is a dicarboxylic acid that is derived from cereals and has a significant effect against acne. More specifically, it has comedolytic, anti-inflammatory and anti-microbial action (it neutralises *Propionibacterium acnes* of the pilosebaceous follicle) that help fight acne and pigmentation, thereby reducing discoloration and in particular, brown spots due to acne.

Action: When applied to acneic skins, it has keratolytic, astringent and antimicrobial effects.

Indications: Acne, seborrhea, enlarged pores, acne scars, actinic keratosis.

Salicylic Peel

Salicylic acid for chemical exfoliation, suitable for acne-oily skin.

It rejuvenates and revitalizes the skin while regulating sebum secretion and reducing oiliness.

Salicylic acid is a beta hydroxy acid that is derived from the bark of the willow tree and has a potent keratolytic action. It reduces the coherence of keratinocytes, thus cleaving the bonds between superficial cells. It enhances the exfoliation process, therefore removing superficial cells. It rejuvenates and revitalises the skin. Its astringent, antibacterial and anti-inflammatory properties regulate sebum secretion and reduce the oiliness of oily-acneic skin.

Action: Keratolytic, astringent and antimicrobial effect.

Indications: Acne-prone skin, seborrhea, enlarged pores.

Chemical Peeling

50ml

Mandelic Acid 40%

Mandelic acid in 40% concentration for mild chemical exfoliation, suitable for all skin types and sensitive skin.

It offers cellular remodelling and hydration of the skin.

Mandelic acid is a member of the family of alpha hydroxy acids; its commercial name is revealing of its natural origin, as it is found in bitter almonds (mandel = almond), as well as in apricots and peaches. Mandelic acid normalizes the keratinization process and enhances skin exfoliation. As a result of its macromolecular structure, it has a mild chemical peeling effect, which helps prevent irritations and makes it suitable for all skin types and all phototypes. It hydrates the skin, enhances cellular remodelling and reduces skin discolouration. Its antimicrobial action makes mandelic acid ideal for fighting acne.

Action: Mild keratolytic effect, skin cell regeneration, hydration, antimicrobial effect.

Indications: Sensitive acne-prone skin, acne rosacea, dark phototypes, fine lines, melasma, enlarged pores, seborrhea, discolouration.

High-tech mesotherapy products with a wide range of professional solutions for targeted and personalised skin care.

Raw materials with state of the art technology for mesotherapy

Hyaluronic acid: Source of inspiration and starting point of the whole Ameson series.

Vitamin C (AA2G): In stabilised form with a comparative superiority in terms of efficiency.

Biomimetic Peptides: The most advanced raw materials technology is applied for the biomimetic effects in skin care, also having an accelerator effect on active ingredients.

Biogenic Caffeine (alcohol free): Usability on the area around the eyes as well.

Active ingredients at the maximum available concentration

- AA2G 20%
- DMAE 4%
- Biogenic Caffeine 35%

Specialized mesotherapy formulas

Maximum safety and efficiency in anti-ageing, regeneration, brightening, slimming and cellulite treatment.

Proven efficiency

Published clinical studies of the ingredients.

The series includes:

- 9 products for the face (blue)
- 3 products for the face and body (grey)
- 2 products for the body (burgundy)

Ameson Mesotech products are recommended for external use and are compatible with:

- Electroporation
- Ultrasound
- Iontophoresis
- Microneedling (Microroller, Micropen)
- RF

Mesotherapy

Face

5 x 5ml

5 x 5ml

Hyal 1%

Hyaluronic acid of medium molecular weight (MMW) in 1% concentration for transdermal application.

It moisturizes the stratum corneum, reduces the appearance of fine lines and tightens the skin.

The basic function of the specific hyaluronic acid structure on the skin is to create a "hyaluronic acid film" on the epidermis, reducing transdermal water loss and thus helping to hydrate the horny layer. **Hyaluronic acid**, as a mesotherapy product, significantly increases the skin's water content. It simultaneously reduces irritation and the negative effects of the environment on the skin.

Action: Hydration, wrinkle smoothing, tightening, glow enhancement.

Indications: Dehydrated skin, fine wrinkles, loss of firmness and skin volume, dull skin.

Package: It contains 5 sterile vials of 5ml.

Hyal 2%

Hyaluronic acid of low molecular weight (LMW) in 2% concentration for transdermal application.

It increases the skin water reserves, reduces the appearance of wrinkles and provides radiance to the skin.

The specific molecular structure of hyaluronic acid penetrates into deeper layers of the skin, with a key action of increasing its water content. As an hydrophilic structural polysaccharide, **Hyaluronic acid** has the ability to bind water up to 1000-fold of its weight. At the same time it improves intracellular communication, reduces oxidative stress and adjusts skin oiliness through an immune reaction mechanism.

Action: Hydration, toning, wrinkle smoothing, glow enhancement.

Indications: Dehydrated skin, wrinkles, loss of firmness, dull skin, small superficial scars.

Package: It contains 5 sterile vials of 5ml.

Mesotherapy

Face

5 x 5ml

5 x 5ml

Hyal 3.5%

Hyaluronic Acid of low molecular weight (LMW) in 3.5% concentration for transdermal application.

It increases the skin water reserves, reduces the appearance of intense wrinkles, tightens and rejuvenates the skin.

The specific molecular structure of hyaluronic acid penetrates into deeper layers of the skin, with a key action of increasing its water content. As an hydrophilic structural polysaccharide, **Hyaluronic acid** has the ability to bind water up to 1000-fold of its weight. At the same time, it improves intracellular communication, reduces oxidative stress and adjusts skin oiliness through an immune reaction mechanism.

Action: Hydration, wrinkle smoothing, tightening, rejuvenation.

Indications: Dehydrated skin, deep wrinkles, dull skin, loss of skin firmness and volume, small superficial scars, looseness.

Package: It contains 5 sterile vials of 5ml.

AA2G 20%

Vitamin C in a stabilized molecular structure with glucose, in 20% concentration for transdermal application.

It offers antioxidant action, protects the skin from UV radiation and reduces the appearance of expression lines and wrinkles.

When **AA2G** comes into contact with skin, the α -glucosidase enzyme of the epidermis cleaves the bond of vitamin C with glucose and induces a gradual release of vitamin C. The specific molecular structure of AA2G protects vitamin C from oxidation and its mode of gradual release provides higher efficiency in its proven effects. It suppresses melanin formation in melanocytes and decreases the amount of pre-existing melanin. It promotes collagen formation in fibroblasts. It reduces free radicals, erythema and swelling caused to the skin by sunlight. It reduces expression lines and wrinkles.

Action: Antioxidant activity, UV protection, rejuvenation, tightening, glow enhancement.

Indications: Photoageing, wrinkles, fine lines, loss of firmness, melasma, skin spots and freckles, dull skin, skin roughness, smokers.

Package: It contains 5 sterile vials of 5ml.

Mesotherapy

Face

5 x 5ml

5 x 5ml

Argireline 10% - Leuphasyl 10%

Cocktail of the peptides Argireline and Leuphasyl in 10% concentrations for transdermal application.

It reduces the appearance of expression wrinkles in the area around the eyes, the forehead and the outline of the lips.

An Argireline-Leuphasyl peptide cocktail that reduces expression wrinkles, inhibiting the contraction and tension of muscles. The action of **Argireline** does not intend to 'immobilise-paralyse' the muscles, as conventional 'botox' treatments do, but instead it 'relaxes' the muscles. Argireline destabilises the SNARE protein, whose action is vital for the release of neurotransmitters conveying the signal for muscle contraction. As a result of this mechanism of action, muscle contractions are limited and expression lines and wrinkles are softened. **Leuphasyl** is a pentapeptide that mimics the action of enkephalin. It binds to the enkephalin receptor and closes calcium channels maintaining the neurons in 'resting phase', reducing muscle contractions and preventing the formation of lines and wrinkles. It has been demonstrated in vitro that the synergistic action of the Argireline-Leuphasyl peptides presents superior efficiency compared to their individual use.

Action: Reduces expression wrinkles.

Indications: Fine lines and expression wrinkles (forehead, eye area, lip contour).

Package: It contains 5 sterile vials of 5ml.

Matrixyl 3000 10% - Argireline 10%

Cocktail of the peptides Matrixyl 3000 and Argireline in 10% concentrations for transdermal application.

It reduces the appearance of wrinkles and expression lines and offers firming and remodelling of the skin.

Matrixyl 3000 and Argireline peptide cocktail provides versatile remodelling and efficiently reduces wrinkles. **Matrixyl 3000** is a combination of the oligopeptides Pal-GHK (Palmitoyl-Gly-His-Lys) & Pal-GQPR (Palmitoyl-Gly-Gln-Pro-Arg), that act as messenger molecules by stimulating the macromolecular formation of extracellular material. These peptides bind to the cell membrane and activate processes aiming to reduce wrinkles, improve skin texture and increase collagen and fibronectin formation. The action of Matrixyl 3000 is combined with the action of **Argireline**, which by preventing the output of neurotransmitters from the cells, results in a decrease of muscle contraction and expression wrinkle formation, with excellent anti-wrinkle results.

Action: Reduction of wrinkles, tightening, remodelling.

Indications: Photoageing, fine wrinkles and expression lines, deep wrinkles, looseness.

Package: It contains 5 sterile vials of 5ml.

Mesotherapy

Face

5 x 5ml

5 x 5ml

Brightening

Cocktail of brightening ingredients for transdermal application. It offers brightness and an even skin tone, reduces the appearance of keloids and protects it from sunlight.

The cocktail includes 3 biomimetic peptides (Oligopeptide-34, -51, -58), vitamin C (AA2G) and α -Arbutin. The peptides act as messengers. This is accomplished by their binding to specific cell receptors, in order to provide the orders for the performance of processes. Specifically, **Oligopeptide-34** reduces the formation of melanin, the action of tyrosinase in melanocytes, as well as the transfer of melanosomes to new keratinocytes. **Oligopeptide-51** 'decolourises' freckles and spots, increases the levels of moisture and forms a uniform skin tone. **Oligopeptide-58** protects skin from the sun, reduces spots and uniformly "brightens" the skin. In addition, Oligopeptide-34 & -51 act as 'boosters' enhancing the overall activity of the cocktail. The action of the peptides is enhanced by the presence of **AA2G**, which contributes to the suppression of melanin formation in melanocytes, as it degrades the existing granules and inhibits the formation of new melanin granules to the skin. Finally, **α -Arbutin** 'blocks' the biosynthesis of melanin in epidermis, offering uniformity of the skin tone and locally reducing freckles and spots.

Action: Glow enhancement, brightness, uniform colour tone.

Indications: Lack of skin colour tone uniformity, hyperpigmentation, age spots, photoageing, dull skin.

Package: It contains 5 sterile vials of 5ml.

DNA-RNA 10%

Complex of hydrolyzed DNA-RNA nucleotides in 10% concentration for transdermal application.

It combats dehydration and improves skin roughness by providing hydration and regeneration.

DNA-RNA Complex contains hydrolysed RNA and DNA segments of low molecular weight, known as nucleotides that fight skin dehydration. At the same time, they significantly enhance the functional activity of skin cells by producing collagen and protecting the cell membrane from free radicals and oxidative stress. DNA-RNA Complex contributes to skin hydration and regeneration.

Action: Hydration, regeneration.

Indications: Dehydrated, dull and rough skin, fine wrinkles.

Package: It contains 5 sterile vials of 5ml.

Mesotherapy

Face

5 x 5ml

Rejuvin

Cocktail of rejuvenating ingredients for transdermal application. It moisturizes by offering volume, reduces the appearance of wrinkles and accelerates the skin regeneration rate.

The cocktail contains MMW hyaluronic acid, 5 biomimetic peptides, 3 vitamins (AA2G, PP, Panthenol), DNA-RNA complex, Arginine and the hydrating agent Unimoist U-125NP. **Hyaluronic acid** binds strongly to water, thus hydrating the skin and offering volume, as well as 'smoothing' wrinkles. **Oligopeptide-20** and **Oligopeptide-24** are peptides with a potent anti-ageing action, which take part in the normal development and healing of the skin, reducing wrinkles by producing new skin cells and enhancing its elasticity by increasing collagen and elastin formation. **Decapeptide-4**, as a tightening and anti-ageing peptide, enhances skin elasticity by increasing collagen and elastin production, it strengthens healing and it prevents-reduces wrinkles by activating new skin cell regeneration. **Oligopeptide-34** reduces the formation of melanin, the action of tyrosinase in melanocytes and the transfer of melanosomes to new keratinocytes. **Oligopeptide-51** 'decolourises' freckles and spots, increases the levels of moisture and forms a uniform skin tone. In addition, Oligopeptide-34 & -51 act as 'boosters' enhancing the overall activity of the cocktail. **AA2G** promotes collagen synthesis in fibroblasts, reduces wrinkles and suppresses melanin formation. **Vitamin PP** (vitamin B complex)

provides hydrating and soothing action and protects the skin's hydrolipid balance. **Panthenol** has a repairing, hydrating, soothing and anti-inflammatory action. **DNA-RNA Complex** contributes to skin hydration and regeneration. **Unimoist U-125** is a biotechnological ingredient containing saccharides and amino acids. Its capability to adjust pH and its hydrating properties are similar to skin NMF (Natural Moisturizing Factor). **Arginine** is an amino acid that improves blood circulation, increases oxygen supply to tissues and accelerates the skin's regeneration rate.

Action: Hydration, remodelling, tightening, reduction of wrinkles.

Indications: Dehydration, dry & dull skin, photoageing, deep wrinkles and fine lines, skin roughness, loss of skin firmness and volume.

Package: It contains 5 sterile vials of 5ml.

Mesotherapy

Face & Body

5 x 5ml

5 x 5ml

DMAE 4%

Precursor molecule of acetylcholine in 4% concentration for transdermal application.

It reduces skin looseness, restores elasticity and improves skin firmness.

DMAE is a precursor molecule of acetylcholine, involved in the increase of muscle tone and biosynthesis of the skin cell membrane. Thus, the looseness of the skin is reduced, the elasticity is restored and its firmness is improved. It also has significant anti-oxidative properties. Finally, DMAE acts as a carrier for the penetration of active ingredients, a feature that provides an advantage in mesotherapy protocols.

Action: Tightening, 'lifting' effect.

Indications: Loss of firmness and elasticity, looseness, wrinkles, stretch marks.

Package: It contains 5 sterile vials of 5ml.

Biogenic Caffeine 35%

Biogenic caffeine in 35% concentration for transdermal application.

It reduces fat storage, combats body cellulite and improves swelling and dark circles in the eye area.

Biogenic Caffeine is a type of active, encapsulated caffeine in an oligomeric complex with natural bonds, free from the problem of crystallization during the manufacturing process, that allows a high concentration of the active substance in the end product, without adding alcohol. It has an excellent compatibility with the skin, it is rapidly absorbed and due to the fact that it is alcohol free, it can be applied around the eyes. It promotes the hydrolysis of triglycerides to free fatty acids and glycerol, reducing fat storages. It decongests and controls fluid retention in the skin, an action that is related to fighting cellulite and reducing swelling around the eyes. It improves blood circulation and reduces swelling and dark circles around the eyes.

Action: Lipolysis, reduction of cellulite, reduction of dark circles around the eyes, decongestion.

Indications: Local fat, cellulite, fluid retention, puffiness and dark circles around the eyes.

Package: It contains 5 sterile vials of 5ml.

Mesotherapy

Face & Body

10 x 7ml

Silicium 0.5%

Silicon in the form of silanol in 0.5% concentration for transdermal application.

It enhances the elasticity and improves the firmness of the skin while providing antioxidant, moisturizing and lipolytic action.

Silicon (in the form of silanol) is a component of the skin and constitutes a portion of important macromolecules, such as elastin and collagen. Silicon interacts with the structural proteins and ensures skin architecture and integrity. It increases and controls fibroblast proliferation by affecting the mitosis phase of the cell cycle. In this way, the regeneration of collagen fibres is enhanced, which increases elasticity and improves skin firmness. It has anti-oxidative and hydrating action and concurrently causes nitric oxide secretion from the connective tissue cells, which stimulates lipolysis. Silanol, also functions as a carrier for the penetration of active ingredients, a feature that offers an advantage to mesotherapy protocols.

Action: Rejuvenation, tightening, remodelling, decongestion, carrier for the penetration of active ingredients, lipolysis.

Indications: Dehydration, loss of firmness, looseness, wrinkles and fine lines, puffy eyes, local fat.

Package: It contains 10 sterile vials of 7ml.

Mesotherapy

Body

10 x 7ml

5 x 5ml

Artichoke 2.5%

Artichoke extract in 2.5% concentration for transdermal application.

It offers antioxidant action while also countering cellulite and edema.

Artichoke is rich in Caffeoylquinic acids, polyphenols and inulin.

Caffeoylquinic acids tone up the lymphatic circulation promoting lymph drainage. Hence, swelling caused by fluid retention is reduced. At the same time, **Polyphenols** and **Inulin** control fat storages in the body, affecting their distribution in adipose tissue and stimulating the process of lipolysis.

Action: Decongestion, detoxication, anti-oxidation, cellulite treatment.

Indications: Cellulite, fluid retention, local fat.

Package: It contains 10 sterile vials of 7ml.

Fat & Cellulite

Cocktail with ingredients that combat topical fat and cellulite for transdermal application.

It reduces fat storage, fights cellulite, promotes the process of lipolysis and enhances skin elasticity.

The cocktail includes Biogenic Caffeine, Artichoke, L-Carnitine and 4 biomimetic peptides. **Biogenic caffeine** promotes the hydrolysis of triglycerides to free fatty acids and glycerol, reducing fat storages. **Artichoke extract** is used for detoxification, reduction of swelling and for the treatment of cellulite. **L-Carnitine** is an amino acid that promotes the transfer of lipids from the cytoplasm into the mitochondria, where they are degraded to fatty acids, thus activating the metabolism. **Tripeptide-41** inhibits the storage of fat in the adipose cells and promotes the process of lipolysis. **Decapeptide-4** and **Oligopeptide-61** enhance the elasticity and remodelling of the skin by increasing collagen and elastin production. In addition, **Oligopeptide-41, -51 & -61** act as 'boosters' enhancing the overall activity of the cocktail.

Action: Combats cellulite, lipolysis, detoxication, tightening.

Indications: Cellulite, fluid retention, local fat, loss of firmness and elasticity.

Package: It contains 5 sterile vials of 5ml.

Mesotherapy after

Mesotherapy after

20ml — 150ml

20ml — 150ml

Calming Bliss

Cream specifically designed for instant soothing of the irritated skin.

It soothes and moisturizes the skin after extreme irritation such as chemical peeling or mesotherapy.

It contains Allantoin, Bisabolol, Panthenol, Centella extract, Aloe Vera and Methyl Salicylate. **Allantoin** is an ingredient with hydrating and healing action. **Bisabolol** is a chamomile derivative with soothing and anti-inflammatory action. **Panthenol** is converted to pantothenic acid (vitamin B5) during its contact with the skin, which hydrates tissues and contributes to the healing of wounds, stimulates the reconstitution of the epithelium and has anti-inflammatory properties. **Aloe Vera** is a natural cocktail of vitamins, enzymes, amino acids and other substances that hydrates and helps to reduce skin irritations and warmth. **Centella extract** is an ingredient used for its regenerative and anti-swelling action. The action of Calming Bliss is enhanced by the **Methyl Salicylate** ingredient, a derivative of salicylic acid, which offers immediate and potent soothing action to the irritated skin.

Action: Soothing, hydrating.

Indications: Intense irritation, erythema, redness.

Use: Apply a small amount to the irritated skin with gentle circular movements until it is absorbed.

Repair Gel

Gel specifically designed to enhance the regeneration of the irritated skin.

It remodels, hydrates and revitalizes the skin after extreme irritation such as chemical peeling or mesotherapy.

It contains Kelifluo 6250, Dermonectin, Pentavitin and Panthenol. **Kelifluo 6250**, an ingredient with a potent regenerative action which creates a film on the surface of the skin, retaining its moisture and simultaneously protecting it under extreme conditions. Additionally it promptly and effectively reduces skin redness and irritation. **Dermonectin** is a precursor compound of fibronectin, that promotes the migration of epidermal cells towards wounded areas and fibroblasts. Consequently, it has the ability of healing wounds, it increases the mechanical strength of the skin, hydration and elasticity, while at the same time, wrinkles are reduced. **Pentavitin** is a complex of carbohydrates with a composition similar to that of the horny layer. It binds with the amino groups of lysine that are present in keratin, leading to a potent, long-term hydration. **Panthenol** is converted to pantothenic acid (vitamin B5) during its contact with the skin, which hydrates tissues and contributes to the healing of wounds, stimulates the reconstitution of the epithelium and has anti-inflammatory properties.

Action: Regeneration, rejuvenation, hydration.

Indications: Irritated and dehydrated skin .

Use: Apply a small amount to the irritated skin with gentle circular movements until it is absorbed.

Mesotherapy after

1 x 6 items

Bio-Cellulose Mask

Moisturizing mask made by fine cellulose fibers that soothes even the most irritated skin.

It offers immediate hydration, cooling sensation and relief to the irritated skin and can be completely adjusted to the shape of the face. Its high biocompatibility reduces immediately and evenly the sensation of inflammation and erythema on the skin.

Its composition derives from coconut water and is enriched with hyaluronic acid, collagen, peptides, ceramides in combination with soothing and anti-inflammatory ingredients.

Ideal for use after:

- Injectable mesotherapy
- Micro-needling
- Chemical peeling
- Laser treatment
- Mild sunburn

Use: Applying the mask demands that the skin is thoroughly cleansed. Remove the mask from the sachet and unfold it. First, remove the protective material on one side and apply the mask to the face, eyes and nose according to the existing notches. Then, remove the second protective gauze. Apply the remaining amount of serum left in the sachet on the neck area and over the mask. Leave it for 15 to 20 minutes and remove. Apply the remaining amount that may be left on the face with gentle massage movements until it is absorbed.

Mesotherapy devices

Microroller

1 item

1 item

Microroller 200 Needles (Face)

Manually operated device of microneedling "technology" cylindrical shaped with 200 needles of stainless steel for direct percutaneous absorption of Mesotherapy products.

It is developed with the aim to increase the transepidermal absorption of various active components of mesotherapy products (Ameson Mesotech by Juliette Armand). At the same time, the creation of a mechanical microtrauma to the epidermis activates the natural mechanism of skin cell regeneration, a mechanism that leads to collagen and elastin production, improving skin touch and vigor.

The Ameson Microroller 200 Needles is integrated in Juliette Armand Mesotherapy protocols with different indications for face: fine lines, deep wrinkles, acne scars, loss of firmness, sagging skin, discolourations.

The Ameson Microroller 200 needles is available in 5 different needle lengths (0.25mm, 0.5mm, 1.0mm, 1.5mm, 2.0mm).

Contraindications: Do not use on irritated skin, in cases of skin infections, acne, moles, keloids, wounds, blood coagulation disorders and problems, malignancies, fever, diabetes mellitus, autoimmune diseases, pregnancy, lactation.

Read the instructions for use carefully before using it.

Microroller 1080 Needles (Body)

Manually operated device of microneedling "technology" cylindrical shaped with 1080 needles of stainless steel for direct percutaneous absorption of Mesotherapy products.

It is developed with the aim to increase the transepidermal absorption of various active components of mesotherapy products (Ameson Mesotech by Juliette Armand). At the same time, the creation of a mechanical microtrauma to the epidermis activates the natural mechanism of skin cell regeneration, a mechanism that leads to collagen and elastin production, improving skin touch and vigor.

The Ameson Microroller 1080 Needles is integrated in Juliette Armand Mesotherapy protocols with different indications for body: local fat, cellulite, stretch marks, deep scars, loss of firmness, sagging skin, discolourations.

The Ameson Microroller 1080 needles is available in 2 different needle lengths (1.5mm, 2.0mm).

Contraindications: Do not use on irritated skin, in cases of skin infections, acne, moles, keloids, wounds, blood coagulation disorders and problems, malignancies, fever, diabetes mellitus, autoimmune diseases, pregnancy, lactation.

Read the instructions for use carefully before using it.

Mesotherapy devices

Micropen

1 item + 2 tips

Micropen

Portable electric device of "microneedling" technology for immediate percutaneous absorption of Mesotherapy products with adjustable automatic mode pulse vibrations.

The creation of a mechanical microtrauma to the epidermis caused by the thin needles adjusted on the device, activates the natural mechanism of skin cell regeneration which in synergy with the action of mesotherapy products, improves the texture and appearance of the skin.

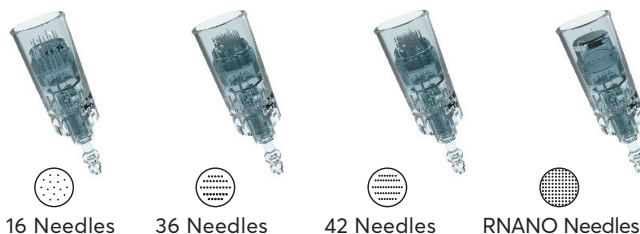

The Ameson Micropen is integrated in Juliette Armand's mesotherapy protocols with different indications for face (fine lines, deep wrinkles, acne scars, slackening, discolorations) and body (local fat, cellulite, stretch marks, deep scars, slackening, discolorations).

Contraindications: Do not use on irritated and contaminated skin, in cases of acne, moles, keloids, wounds, blood coagulation disorders and problems, malignancies, fever, diabetes mellitus, autoimmune diseases, pregnancy, lactation.

Content of Packaging: The packaging contains 1 Micropen, 1 adapter, 1 USB power cord, 2 disposable tips of 36 and RNANO needles (for the RNANO needles the above contraindications do not apply except for irritated and contaminated skin, in cases of acne and wounds), while disposable tips of 16 and 42 needles can also be purchased separately. All the needles included are sterile and made of stainless steel.

Read the instructions for use carefully before using it.

Available Needle Cartiges:

Recommended Needle Length Settings:

Area	Thin skin	Thick skin
Forehead	0.25mm	0.25 - 0.5mm
Glabella	0.25 - 0.5mm	0.5 - 0.75mm
Neck / Décolleté	0.25 - 0.5mm	0.5 - 0.75mm
Nose	0.25mm	0.25 - 0.5mm
Area around the eyes	0.25mm	0.25 - 0.5mm
Cheeks	0.25 - 0.5mm	0.5 - 0.75mm
Chin	0.5 - 1.0mm	0.75 - 1.5mm
Upper lip	0.25mm	0.25 - 0.5mm
Scars	1.0 - 1.25mm	1.0 - 2.0mm
Stretch marks	1.5 - 2.0mm	1.5 - 2.5mm

The protocols of the Ameson Skin Medical series are the scientific proposal of Juliette Armand for the optimal utilization of mesotherapy and chemical peel products with proven immediate results and safety of use.

Protocols Mesopeel:

Chemical peel protocols are either autonomous or integrated in specific mesotherapy protocols. The products and protocols are accompanied by clear indications, instructions for use, side effects, maximum application time and repeatability, recommended recuperation products and of course strictly specialized sun protection.

Protocols Mesotech:

Juliette Armand Applied Research and Development Department supports our collaborators with recommended face and body mesotherapy protocols. The protocols consist of detailed instructions for use, indications and action descriptions of the active ingredients included in each treatment, in combination with recommended products for recuperation and protection of the skin after for not only after the treatment in completed but also for home use.

Chemical Peeling

Treatment protocol guide

Step 1: Cleansing

Cleanse the skin thoroughly with the appropriate cleanser according to skin type.

Step 2: Preparation

Soak in a cotton pad the Pro-Peel Lotion and apply it on the face and neck. Apply the Pro-Peel Lotion twice for reducing skin's pH and prepare it to receive the chemical peel.

Protect the sensitive areas (periorbital, perioral, nasal ala, nevi) by applying an oily paste.

Step 3: Chemical Peeling

Apply the appropriate Mesopeel product all over the face, by using a soaked cotton swab. Begin with the forehead and the outer areas of the face. Continue working towards the central part of the face and the neck. Begin with the forehead and the outer areas of the face. Continue working towards the central part of the face. Apply to the upper lip area and cheeks. Only a thin layer is necessary. Leave the product to act for up to 2'. In the following sessions we increase the time by 1' with a maximum:

Glycolic Acid 50%	6' max.
Glycolic Acid 70%	3' max.
Lactic Acid 50%	7' max.
Lactic Acid 80%	3' max.
Mandelic Acid 40%	7' max.
Salicylic Peel	5' max.
Salicylic-Azelaic	7' max.

Check for erythema. If erythema develops before the end of the predefined time, neutralize with the Post-Peel Lotion.

Step 4: Neutralization

Thoroughly neutralize the chemical peeling by soaking in a cotton pad the Post-Peel Lotion and apply it on the face and neck 2 times until there isn't any tingling sensation.

Step 5: Hydration / Calming

After the therapy is completed, first apply the Bio-Cellulose Mask following the relevant instructions for use and continue by using the Calming Bliss for immediate relief and hydration of the skin irritated by the treatment.

Step 6: Repair

Apply the Repair Gel on the areas where the chemical peeling was applied to accelerate the regeneration and rejuvenation of the skin.

Step 7: Sun protection

Apply the appropriate Sunfilm sunscreen on the areas where the chemical peeling was applied.

Sessions / Repeatability:

6 sessions with a minimum interval of 2 weeks between sessions.

Maintenance:

1 session every 4 months
